

# KALHD Immunization Symposium

Monday, May 20 | Wichita Marriott

## Purpose

Kansas Local Health Departments play a unique role in service to their communities. Public health professionals are the “faces” of public health. They provide health education, answer questions and address concerns raised by community members, from parents in exam rooms to customers at the local restaurant to county commissioners holding a regular meeting. This one-day symposium is customized for local health department employees, providing the data, skills and tools to have critical conversations about the impact of immunizations.

## Participants will

- View data trends for immunization rates in Kansas and identify areas for improvement.
- Explore communication tools to hold conversations with parents and community members.
- Understand how to generate reports from KSWebIZ.
- Learn about vaccine preventable diseases and the impact of immunizations.
- Network with Kansas immunization professionals.
