

Bronze Propeller Competition

FAA Registration

Updated 4/10/2019

Introduction

Your aircraft must be registered with the Federal Aviation Administration (FAA) prior to a first flight. The registration process is fairly easy. The following website talks about educational users (i.e., us):

https://www.faa.gov/uas/educational_users/

We will be flying under the *Educational User* category, using *Option 2: Fly as a Recreational Fliers or as part of a Modeler Community-Based Organization*. The next website takes you to the registration page:

<https://faadronezone.faa.gov/#/>

Be sure to select the second option, *Fly Model Aircraft under Section 336*, or simply follow this link:

<https://faadronezone.faa.gov/#/register>

There are a few things you need to note, specifically:

- You are only registering your aircraft, I'll be supplying a FAA certified pilot
- A team member with U.S. citizenship needs to complete the registration process (let me know if this is an issue)
- Registration cost \$5 (you will need a credit card to pay)
- Your aircraft fits into the "modeler/hobby/recreational category" (don't register as a commercial, government, or non-hobby owner)
- Use the registering team member's address during registration
- You are required to have a FAA registration certificate in possession when operating the aircraft (either a paper or electronic format)
- You must mark your aircraft with the registration information

Please let me know if you have any questions.
