

QUESTION: Is SEAS being deployed successfully?

Table 1: Student Early Alert System (SEAS) End-of-Term Fall 2017 (COURSE LEVEL Univariate)

569 class sections, 322 instructors (unique headcount) & 9,687 students (unique headcount, 71% of census degree bound students)

College/Department	Section counts		% students at risk		Mean # of students per class	% students enrolled		% students at risk
Total	569	100%	23.8%		32.0	7.3	23.8%	
Business	85	14.9%	19.0%					
Education	52	9.1%	18.5%					
Engineering	54	9.5%	29.4%					
Fine Arts	33	5.8%	16.5%					
Health Professions	81	14.2%	21.2%					
LAS Humanities	85	14.9%	25.5%					
LAS Natural Sciences & Math	70	12.3%	34.8%					
LAS Social Sciences	98	17.2%	20.6%					
LAS Other	8	1.4%	low count					
Other College Units (Honors/IIC)	3	0.5%	low count					
(see SEAS College Division Participation Report for department counts)								

Students on Census in SEAS participating class: 9,687
 % of all students on Fall census: 64.2%
 % all degree bound students on fall census: 71.0%
 % undergraduate degree bound on fall census: 88.3%

Tues & Thur	161	40%	23.2%				
Mon, Wed, Fri	34	8%	38.8%				
other	20	5%	24.4%				

Summary: With 64.2% of all students and 88.3% of all degree bound undergraduate students in a SEAS participating class, deployment of SEAS is exceeding expectations, especially given this is a voluntary commitment by faculty. Review of the class dimensions reflect participation in nearly every level of measurement from across colleges, course levels, time and day of week, class types and methods, general education and basic skills and instructor type. A notable increase this year was an increase in GTAs who now are equivalent to lecturers in participating SEAS classes, especially important given the concentration of GTAs in lower level course offerings.

QUESTION: Is there a relationship between SEAS risk and at-risk populations and does SEAS change behavior?

Table 2: Student Early Alert System (SEAS) End-of-Term Fall 2017 (STUDENT LEVEL Bivariate)
 (sample: unique count 9,687 students in SEAS participating classes; source: end of term data from BIPMS SS_SEAS)

All Students in SEAS courses at end of term (includes undergraduate and graduate)

total students	not at-risk	at-risk	% at-risk	Risk type:	of all eligible SEAS stds	of those marked at-risk	% removed from at-risk after notification
9,687	6,997	2,690	27.8%	attendance	9.6%	33.2%	34.6%
71% of Fall 2017 census degree bound students (UG & GR)				participation	7.5%	26.0%	38.0%
8,772	6,226	2,546	29.0%	assignments	17.6%	60.6%	30.0%
88% of Fall 2017 census degree bound students undergraduates				exams	19.1%	65.8%	37.9%

students who withdraw after at-risk notification:**

num withdrew from course after notification	513 (20.1% of at-risk)	num at-risk dimensions per student marked at-risk:		
of withdrawals % within 1 week of at-risk	52.2%	at-risk dimension count	100%	cuml %
of withdrawals % within 2 week of at-risk	12.9%	1	53.9%	54%
of withdrawals % within 3 week of at-risk	34.9%	2	24.7%	79%
		3	10.8%	89%
		4	10.5%	100%

Bivariate Comparison of Undergraduates degree bound in SEAS Participating Classes

CAUTION-- differences are impacted by course selectivity bias

% first generation	44.3%	42.9%a	47.5%b				
% family income <= 125% of poverty	16.0%	15.3%a	17.7%b				
% on financial aid	79.1%	80.8%a	75.1%b				
% in university housing	12.1%	12.5%a	11.1%a				

* Values in the same row not sharing the same subscript (a or b) are significantly different at p< .05 level; bold values with ^ are meaningfully significant at moderate or higher level.

** **under-represented minority** includes American Indian/Alaskan Native, Black non-Hispanic, Hawaiian & Hispanic; **incoming academic ability** is a standardized composite of HS gpa, HS percentile and ACT/SAT (0-100 lower scores the greater likelihood of academic failure); **low income** is defined as total family income (2016 dollars, cpi) at or below 125% of the poverty threshold based on family size.

Summary: While there are few statistically significant differences between at-risk and non-risk students among academic profiles and demographic measures, there are several academic performance measures where at-risk students are performing below non-risk students. These findings support the assumption that SEAS risk behavior dimensions (attendance, participation, assignments, exams/quizzes) are correlated with behavior that increases the odds of being academically at-risk. The data also supports the belief that informing students of their behavior risk during the semester can cause students to modify their behavior to reduce risk.

QUESTION: Does SEAS behavioral risk activity have an independent impact on performance outcomes net of controls?

Table 3: Student Early Alert System (SEAS) End-of-Term Fall 2017 (Multi-variate Analysis)

Course-level analysis (OLS regression) regressing predictors on course grade gpa outcome (dependent variable = course grade gpa 0 - 4) among undergraduate degree seeking SEAS students.

Predictors (predicting end of term class gpa)	unstd beta	std beta	sig.	share of unique
SEAS Risk dimensions:				
attendance risk (0,1)	-0.389	-0.127	0.000	11.6%
Demographics:				
age in years	n/a (student earned hours is proxy)			
female (0,1)	0.168	0.063	0.000	2.6%
under-represented minority* (0,1)		not significant		
first generation (0,1)		not significant		
low income <= 125% of poverty (0,1)	-0.156	-0.045	0.003	1.4%
international (0,1)		not significant		
university housing (0,1)		not significant		
Academic status:				
enrolled full-time (0,1)		not significant		
cumulative earned hours (student class proxy)	0.004	0.130	0.000	8.0%
student is college division major (0,1)	0.123	0.045	0.005	1.2%
undecided major (0,1)		not significant		
Performance & entering academic ability:				
history of probation	-0.903	-0.334	0.000	72.6%
incoming academic ability composite*	0.046	0.065	0.000	2.6%
Rsq	0.308		0.000	

Summary: The above OLS regression shows that class attendance issues have a negative independent impact on end-of-term gpa net of controls. These findings lend support to the argument that SEAS dimensions not only correlate with negative academic performance but that SEAS dimensions can have an important negative consequences on performance outcomes.

Student-level analysis (logistic regression) regressing predictors on SEAS risk indicator (dependent variable = SEAS risk 0,1 where 1=risk) among undergraduate degree seeking SEAS students.

Predictors (predicting at-risk student)	beta	sig.	odds of risk
Demographics:			
age in years	n/a (student earned hours is proxy)		
female (0,1)	-0.131	0.012	0.878 12% less likely
under-represented minority* (0,1)	0.184	0.004	1.201 20% more likely
first generation (0,1)	0.160	0.003	1.174 17% more likely
low income <= 125% of poverty (0,1)	0.153	0.004	1.158 16% more likely
international (0,1)		not significant	
university housing (0,1)		not significant	
Academic status:			
enrolled full-time (0,1)	-0.269	0.000	0.764 24% less likely
cumulative earned hours (student class proxy)	-0.002	0.000	0.998 .01% less likely per hour
undecided major (0,1)		not significant	
Performance & entering academic ability:			
history of probation	1.066	0.000	2.904 190% more likely
incoming academic ability composite*	-0.117	0.000	0.890 11% less likely per increase

* Under-represented minority includes Black non-Hispanic, Hispanic, American Indian, Alaskan Native & Hawaiian; incoming academic ability is a standardized composite of application gpa and high school percentile (ACT/SAT has no significance).
