AMUG PURPOSE
To continue to provide professional development to water and wastewater professionals to further the implementation of asset management concepts through networking with other systems and content experts.

MEETING THEME
Collecting and using quality data

AGENDA
10:00 Welcome & Introductions

10:15 Lemons to Lemonade: Using Asset Management Principles to Assure Quality Data
When asset management is on your to do list have you wondered “Where do I start,” or “How do I do this?” The scope of the task is daunting, at best, and overwhelming at worst. KC Water will share their real-world approach to asset management implementation, focusing on its most fundamental component, Quality Data, and the benefits of operating from a quality data perspective.

High quality data is the lifeblood to developing an effective asset management program and is necessary to determine how the other concepts in asset management will be utilized for making business decisions. Discover how a multi-stakeholder team of individuals, representing a variety of perspectives and business needs and unified around the concepts and goals of asset management, worked together to develop a data application that met all these goals.

Scott Parker, Utility Asset Manager, Kansas City Water
