

RADON RISKS

THE SILENT KILLER

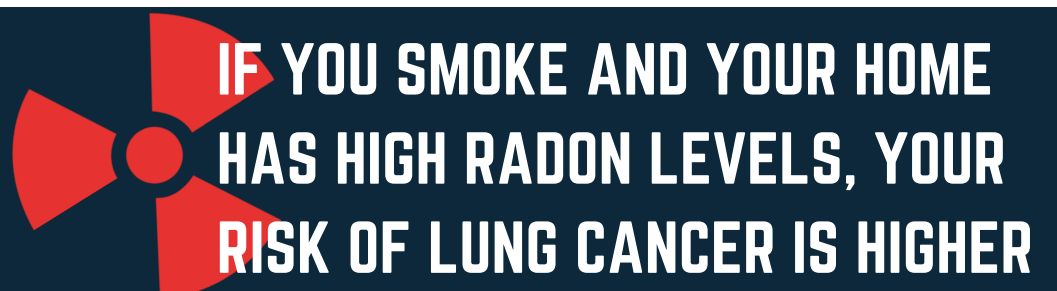

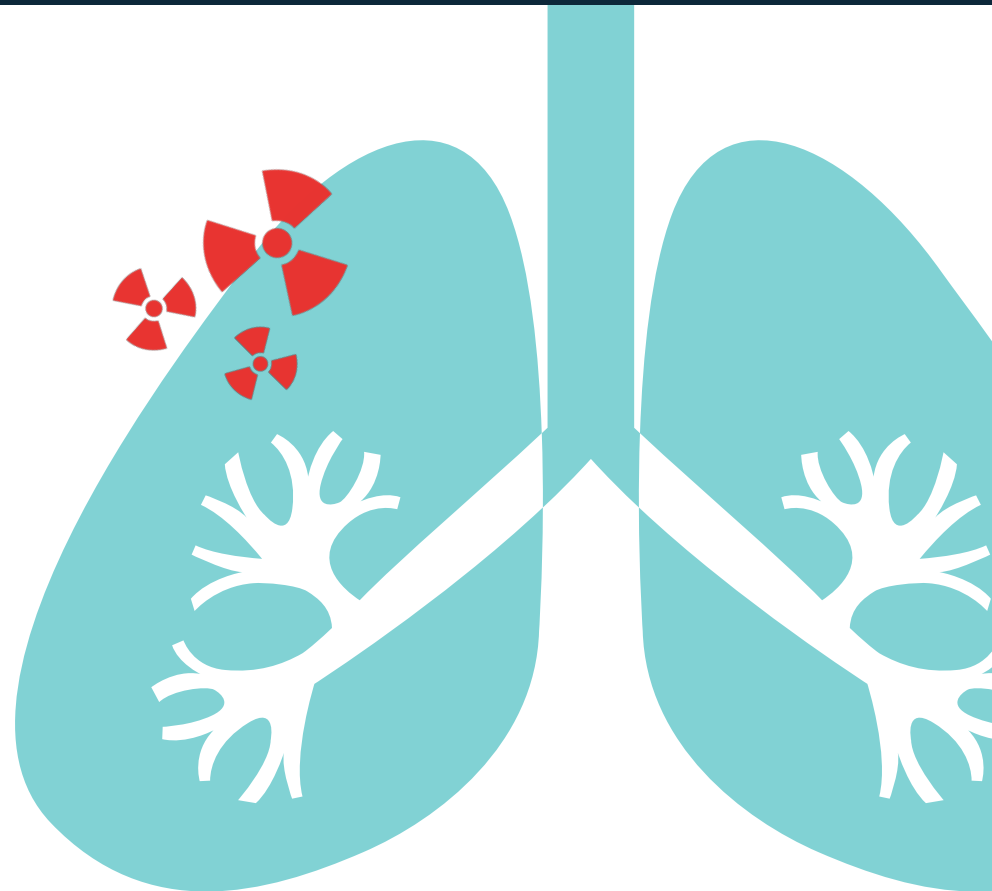

You can't see radon.
And you can't smell it or taste it.
But it may be a problem in your home.

WHAT IS RADON?

Radon is a radioactive gas that occurs naturally in soil. Radon enters our homes from the soil through cracks in concrete floors, walls, floor drains and sump pits.

As we breathe, the radon gas can release tiny bursts of energy that can damage living lung tissue and can lead to lung cancer over time.

TEST YOUR HOME

Testing is the only way to know if your family is at risk from radon. Testing is inexpensive and easy.

Order a test kit at:
hhs.iowa.gov

Or by calling **1-800-SOS-RADON**
