FOREWORD	ii
SUMMARY OF CHANGES	xxv
CHAPTER 1 GENERAL INFORMATION	1
1.1 INTRODUCTION TO THE HANDBOOK	1
1.2 OVERVIEW OF HANDBOOK CONTENT	1
1.3 PURPOSE AND SCOPE OF VOLUME 3.....	2
1.4 MATERIAL ORIENTATION CODES	3
1.4.1 Laminate orientation codes	3
1.4.1.1 Stacking sequence notation	3
1.4.1.2 Ply percentage notation.....	5
1.4.2 Braiding orientation codes	6
1.5 SYMBOLS, ABBREVIATIONS, AND SYSTEMS OF UNITS.....	6
1.5.1 Symbols and abbreviations	6
1.5.1.1 Constituent properties	11
1.5.1.2 Laminae and laminates	12
1.5.1.3 Subscripts.....	13
1.5.1.4 Superscripts.....	14
1.5.1.5 Acronyms.....	14
1.5.2 System of units	16
1.6 DEFINITIONS	17
REFERENCES	41
CHAPTER 2 INTRODUCTION TO COMPOSITE STRUCTURE DEVELOPMENT	1
2.1 INTRODUCTION	1
2.1.1 Why composites are different.....	1
2.1.2 A different development approach	2
2.1.3 Limitations on this Chapter	3
2.2 BEHAVIOR OF COMPOSITES – MECHANICS.....	3
2.2.1 Materials terminology and coordinate systems	3
2.2.2 Mechanical properties at the material level	4
2.2.3 Stacking sequence issues	5
2.2.4 Environmental effects	7
2.2.5 Damage effects	8
2.2.6 Variability issues.....	9
2.2.7 Mechanical properties for design	10
2.3 MATERIAL SELECTION.....	11
2.3.1 Structural materials.....	11
2.3.1.1 Fiber types.....	11
2.3.1.2 Composite material forms	12
2.3.1.3 Resin types.....	12
2.3.1.4 Fiber forms	13
2.3.1.5 Adhesive types	14
2.3.1.6 Sandwich material types	14
2.3.2 Ancillary materials	15
2.3.3 Material selection considerations	16

TABLE OF CONTENTS

	Page
2.4 MANUFACTURING PROCESS SELECTION	18
2.4.1 Process steps and options	18
2.4.2 Tooling approaches	21
2.4.3 Quality assurance processes	23
2.4.4 Process selection considerations	24
2.5 STRUCTURAL CONCEPTS	25
2.5.1 Basic construction types	25
2.5.2 Joint types	26
2.5.3 Assembly of detail parts	28
2.5.4 Integration of large composite structures	29
2.5.5 Assembly into complete structure	30
2.6 DEFECT AND DAMAGE ISSUES	31
2.6.1 General defect and damage considerations	31
2.6.2 Defect and damage sources	32
2.6.2.1 Manufacturing sources	32
2.6.2.2 In-service damage sources	33
2.6.3 Defect and damage characteristics	33
2.6.4 In-service inspection for defects and damage	34
2.6.5 Addressing defects and damage during design and development	35
2.6.5.1 General design and development considerations	35
2.6.5.2 Specific design considerations and approaches	36
2.6.5.3 Development of an aircraft inspection program: impact surveys	37
2.7 LIFETIME CONSIDERATIONS	37
2.7.1 Environmental degradation	38
2.7.2 Maintenance issues	38
2.7.3 Issues related to changes in "mission spectrum"	38
2.7.4 Environmental management	38
2.8 DEVELOPMENT PROGRAM OUTLINE	39
REFERENCES	41
CHAPTER 3 AIRCRAFT STRUCTURE CERTIFICATION AND COMPLIANCE.....	1
3.1 INTRODUCTION	1
3.1.1 General (background).....	1
3.1.2 Purpose and scope.....	1
3.2 CERTIFICATION CONSIDERATIONS	2
3.2.1 Product development (initial airworthiness).....	2
3.2.2 Continued airworthiness	3
3.2.3 Product modification (changed product).....	4
3.2.4 Qualified workforce and teamwork	5
3.3 REGULATIONS	6
3.3.1 Structure, design, and construction	6
3.3.2 Production approval.....	7
3.3.3 Continued airworthiness (maintenance)	10
3.4 DESIGN SUBSTANTIATION	11
3.4.1 Design and process documentation	11
3.4.2 Material/adhesive qualification	12
3.4.3 Environmental exposure and fluid compatibility	13
3.4.4 Structural bonding	14
3.4.5 Tools and part cure.....	15
3.4.6 Flaws experienced in production	15
3.4.7 Structural conformity process.....	16

TABLE OF CONTENTS

	Page
3.4.8 Structural substantiation (static strength and damage tolerance)	17
3.4.9 Flutter substantiation (aero-elastic stability)	20
3.4.10 Fire protection, flammability, and thermal issues	20
3.4.11 Lightning strike protection	22
3.4.12 Crashworthiness	22
3.5 PRODUCTION - ESSENTIALS	23
3.5.1 Production implementation	24
3.5.2 Manufacturing quality control	24
3.5.3 Defect disposition and manufacturing records	27
3.5.4 Modification of the production process	28
3.6 MAINTENANCE - TECHNICAL ISSUES	29
3.6.1 Repair design and process substantiation	29
3.6.2 Teamwork and disposition	30
3.6.3 Damage detection and characterization	32
3.6.4 Repair processes (bonded vs. bolted)	34
3.7 GUIDANCE AND REPORTS	35
3.7.1 Advisory circulars	35
3.7.2 Policy statements	37
3.7.3 Technical reports	38
CHAPTER 4 BUILDING BLOCK APPROACH FOR COMPOSITE STRUCTURES	1
4.1 INTRODUCTION AND PHILOSOPHY	1
4.2 RATIONALE AND ASSUMPTIONS	4
4.2.1 Risk reduction	5
4.3 METHODOLOGY	6
4.3.1 Failure modes	7
4.3.2 Analysis	7
4.3.3 Material qualification and allowables (coupon level)	8
4.3.4 Design detail allowables (element test level)	9
4.3.5 Critical structure pre-production assurance (subcomponent test level)	9
4.3.6 Full-scale structure validation—component level tests	9
4.3.6.1 Full-scale static test	9
4.3.6.2 Full-scale aircraft durability and damage tolerance testing	10
4.4 CONSIDERATIONS FOR SPECIFIC APPLICATIONS	11
4.4.1 Aircraft for prototypes	11
4.4.1.1 PMC composite allowables generation for DOD/NASA prototype aircraft structure	11
4.4.1.2 PMC composites building block structural development for DOD/NASA prototype aircraft	15
4.4.1.3 Summary of allowables and building block test efforts for DOD/NASA prototype composite aircraft structure	20
4.4.2 Aircraft for EMD and production	20
4.4.2.1 PMC composite allowables generation for DOD/NASA EMD and production aircraft structure	20
4.4.2.2 PMC composite building block structural development for DOD/NASA EMD and production aircraft	24
4.4.2.3 Summary of allowables and building block test efforts for DOD/NASA EMD and production composite aircraft structure	29
4.4.3 Commercial aircraft	29
4.4.3.1 Introduction	29
4.4.3.2 The building block approach	29

TABLE OF CONTENTS

	Page
4.4.3.2.1 Certification approaches	30
4.4.3.2.2 Allowables versus design values	31
4.4.3.2.3 Lamina vs. laminate derived allowables for predicting strength	31
4.4.3.2.4 Product development	32
4.4.3.3 Composite road map	32
4.4.3.3.1 Criteria	33
4.4.3.3.2 Regulations	33
4.4.3.4 Commercial building block approach	34
4.4.3.5 Group A, material property development	34
4.4.3.5.1 Block 1 - material screening and selection	34
4.4.3.5.2 Block 2 - material and process specification development	35
4.4.3.5.3 Block 3 - allowables development	35
4.4.3.6 Group B, design-value development	36
4.4.3.6.1 Block 4 - structural element tests	36
4.4.3.6.2 Block 5 - subcomponent tests	38
4.4.3.7 Group C, analysis verification	38
4.4.3.7.1 Block 6 - component test	39
4.4.3.8 Boeing 777 aircraft composite primary structure building block approach	39
4.4.3.8.1 Introduction	39
4.4.3.8.2 Coupons and elements	40
4.4.3.8.3 Subcomponents	41
4.4.3.8.4 Components	43
4.4.3.8.5 777 pre-production horizontal stabilizer test	43
4.4.3.8.6 Fin root attachment test	45
4.4.3.8.7 777 horizontal stabilizer tests	45
4.4.3.8.8 777 vertical stabilizer test	45
4.4.3.8.9 Future programs	46
4.4.4 Business and private aircraft	46
4.4.4.1 High performance	46
4.4.4.1.1 Introduction	46
4.4.4.1.2 Typical building block program	47
4.4.4.2 Lightweight and kit	51
4.4.5 Rotorcraft	51
4.4.5.1 Design allowables testing	52
4.4.5.1.1 Airframe	52
4.4.5.1.2 Rotor system	53
4.4.5.1.3 Drive system	54
4.4.5.2 Design development testing	54
4.4.5.2.1 Airframe	54
4.4.5.2.2 Rotor system	55
4.4.5.2.3 Drive system	55
4.4.5.3 Full scale substantiation testing	56
4.4.5.3.1 Airframe	57
4.4.5.3.2 Rotor system	57
4.4.5.3.3 Drive system	58
4.4.6 Launch vehicles and spacecraft	59
4.5 SPECIAL CONSIDERATION AND VARIANCES FOR SPECIFIC PROCESSES AND MATERIAL FORMS	61
4.5.1 Room temperature	61
REFERENCES	62

CHAPTER 5 MATERIALS AND PROCESSES - THE EFFECTS OF VARIABILITY ON COMPOSITE PROPERTIES 1

5.1	INTRODUCTION	1
5.2	PURPOSE	1
5.3	SCOPE.....	1
5.4	CONSTITUENT MATERIALS.....	1
5.4.1	Fibers.....	1
5.4.1.1	Carbon and graphite fibers.....	1
5.4.1.1.1	Carbon vs. graphite	2
5.4.1.1.2	General material description.....	4
5.4.1.1.3	Processing	4
5.4.1.1.4	Typical properties	6
5.4.1.2	Aramid	6
5.4.1.3	Glass	8
5.4.1.3.1	Chemical description	8
5.4.1.3.2	Physical forms available	9
5.4.1.3.3	Advantages and disadvantages	12
5.4.1.3.4	Common manufacture methods and variable.....	14
5.4.1.4	Boron	15
5.4.1.5	Alumina.....	17
5.4.1.6	Silicon carbide	19
5.4.1.7	Quartz.....	21
5.4.1.8	Ultrahigh molecular weight polyethylene.....	26
5.4.2	Resins.....	29
5.4.2.1	Overview.....	29
5.4.2.2	Epoxy.....	30
5.4.2.3	Polyester (thermosetting)	30
5.4.2.4	Phenolic.....	30
5.4.2.4.1	Resoles.....	31
5.4.2.4.2	Novolacs	31
5.4.2.5	Bismaleimide	31
5.4.2.6	Polyimides	32
5.4.2.7	Thermoplastic materials	32
5.4.2.7.1	Semi-crystalline	32
5.4.2.7.2	Amorphous	34
5.4.2.8	Specialty and emerging resin systems.....	36
5.4.2.8.1	Silicone	36
5.5	PROCESSING OF PRODUCT FORMS	36
5.5.1	Fabrics and preforms.....	36
5.5.1.1	Woven fabrics.....	36
5.5.1.1.1	Conventional woven fabrics.....	36
5.5.1.1.2	Stitched or knitted fabrics	38
5.5.1.1.3	Specialty fabrics and preforms	38
5.5.2	Preimpregnated forms.....	38
5.5.2.1	Prepreg roving.....	38
5.5.2.2	Prepreg tape.....	38
5.5.2.2.1	Conventional unidirectional tapes.....	39
5.5.2.2.2	Two-step unidirectional tapes	39
5.5.2.2.3	Supported unidirectional tapes	39
5.5.2.2.4	Coated unidirectional tapes	39
5.5.2.2.5	Preplied unidirectional tapes	39

TABLE OF CONTENTS

	Page
5.5.2.3 Prepreg fabric and preforms.....	40
5.5.2.4 Preconsolidated thermoplastic sheet	40
5.5.3 Detailed guidelines for defining a “batch” or “lot” of material for production use	41
5.6 SHIPPING AND STORAGE PROCESSES	42
5.6.1 Packaging	42
5.6.2 Shipping.....	42
5.6.3 Unpackaging and storage	43
5.7 CONSTRUCTION PROCESSES	43
5.7.1 Hand lay-up	43
5.7.2 Automated tape placement/automated tape lamination.....	45
5.7.2.1 Background	45
5.7.2.2 Benefits/capabilities.....	45
5.7.2.3 Sources of variability	45
5.7.3 Automated tow placement/fiber placement	46
5.7.3.1 Background	46
5.7.3.2 Fiber placement process flow.....	47
5.7.3.3 Benefits/capabilities.....	47
5.7.3.4 Material product forms.....	48
5.7.3.5 Special considerations	49
5.7.4 Braiding	51
5.7.5 Filament winding.....	52
5.7.6 Pultrusion.....	53
5.7.7 Sandwich construction.....	53
5.7.8 Adhesive bonding	54
5.7.9 Prebond moisture	55
5.7.10 Adhesive bond quality	56
5.8 CURE AND CONSOLIDATION PROCESSES.....	60
5.8.1 Vacuum bag molding.....	60
5.8.2 Oven cure	60
5.8.3 Autoclave curing processing	61
5.8.3.1 General description	61
5.8.3.2 Sources of variability	61
5.8.4 Press molding.....	62
5.8.5 Integrally heated tooling	62
5.8.6 Pultrusion die cure and consolidation.....	62
5.8.7 Resin transfer molding (RTM)	63
5.8.8 Thermoforming	66
5.9 ASSEMBLY PROCESSES	66
5.10 PROCESS CONTROL.....	67
5.10.1 Common process control schemes	67
5.10.1.1 Empirical methods.....	67
5.10.1.2 Active sensor based control	67
5.10.1.3 Passive model based control	68
5.10.2 Example - autoclave cure of a thermoset composite	68
5.10.2.1 Degree of cure.....	70
5.10.2.2 Viscosity	70
5.10.2.3 Resin pressure	70
5.10.2.4 Void prevention.....	71
5.10.2.5 Flow	71
5.11 PREPARING MATERIAL AND PROCESSING SPECIFICATIONS.....	72
5.11.1 Types of specifications	72

TABLE OF CONTENTS

	Page
5.11.1.1 Material specifications	72
5.11.1.2 Process specs - controls end product	72
5.11.2 Format for specifications	73
5.11.2.1 Scope	73
5.11.2.2 Applicable documents	73
5.11.2.3 Technical requirements/process controls.....	73
5.11.2.4 Receiving inspection and qualification testing.....	73
5.11.2.5 Delivery.....	74
5.11.2.6 Notes	74
5.11.2.7 Approved sources and other	74
5.11.3 Specification examples.....	74
5.11.3.1 Industry.....	74
5.11.3.2 Military	74
5.11.4 Configuration management	75
5.12 DETERMINING SOURCES OF VARIABILITY DURING A COMPOSITE MATERIAL QUALIFICATION	75
5.12.1 Introduction	75
5.12.1.1 Composite material property variability from sources other than batch.....	76
5.12.1.2 Conventional qualification and allowables calculation	77
5.12.2 Development and application of the nested qualification approach.....	78
5.12.2.1 Development background	78
5.12.2.1.1 Regression approach.....	79
5.12.2.1.2 Crossplied testing	81
5.12.2.1.3 General aviation "AGATE" process lot approach	82
5.12.2.1.4 Single panel testing	83
5.12.2.1.5 Nested experiments.....	83
5.12.2.2 Carbon/epoxy qualification approach.....	84
5.12.2.3 Data review.....	86
5.12.2.4 Data analysis.....	91
5.12.2.4.1 Tension	91
5.12.2.4.2 Compression.....	92
5.12.2.4.3 Glass transition temperature.....	93
5.12.2.5 Nested development review and conclusions	94
5.12.3 Example of nested qualification data allowables calculation results using regression	94
5.12.4 Qualification of Vendor C manufacturing Vendor A material.....	98
5.12.4.1 Introduction.....	98
5.12.4.2 Qualification layout	99
5.12.4.3 Autoclave cure schedule for process lots.....	104
5.12.4.4 Process and test lot schedule	104
5.12.4.5 Vendor C S2 G/Ep material sources of variability	112
5.12.4.6 Summary	114
5.12.5 Design allowables using nested approach	115
5.12.6 Nested qualification cost issues	123
5.12.7 Summary	124
REFERENCES.....	126
CHAPTER 6 QUALITY CONTROL OF PRODUCTION MATERIALS AND PROCESSES	1
6.1 INTRODUCTION	1
6.2 MATERIAL PROCUREMENT QUALITY ASSURANCE PROCEDURES	1

TABLE OF CONTENTS

	Page
6.2.1 Specifications and documentation.....	1
6.2.2 Material control at the supplier level.....	1
6.2.2.1 Process control documents (PCD).....	2
6.2.2.2 Statistical process control (SPC).....	2
6.2.2.3 Lot release testing	2
6.2.3 Material control at the user level	3
6.2.3.1 Lot acceptance/receiving inspection	3
6.2.3.2 Shelf life and out time control	5
6.3 PART FABRICATION VERIFICATION.....	5
6.3.1 Process verification	5
6.3.2 Nondestructive inspection (NDI).....	7
6.3.3 Destructive tests (DT).....	7
6.3.3.1 Background	7
6.3.3.2 Usage	8
6.3.3.3 Destructive test approaches.....	8
6.3.3.4 Implementation guidelines.....	9
6.3.3.5 Test types	9
6.4 MANAGING CHANGE IN MATERIALS AND PROCESSES.....	10
6.4.1 Introduction	10
6.4.2 Qualification of new materials or processes.....	10
6.4.2.1 Problem statement	10
6.4.2.2 Business case	12
6.4.2.3 Divergence and risk.....	12
6.4.2.4 Technical acceptability	12
6.4.2.5 Allowables development and equivalency validation	12
6.4.2.6 Production readiness.....	12
6.4.2.7 Lessons learned	12
6.4.3 Divergence and risk.....	12
6.4.3.1 Divergence	13
6.4.3.2 Risk assessment	15
6.4.3.3 Risk analysis.....	16
6.4.4 Production readiness.....	17
6.5 STATISTICAL TOOLS FOR IMPROVING PROCESSES	18
6.5.1 Process feedback adjustment	18
6.5.2 Design of experiments.....	20
6.5.3 Taguchi	28
REFERENCES	29
CHAPTER 7 DESIGN OF COMPOSITES.....	1
7.1 OVERVIEW OF UNIQUE ISSUES ASSOCIATED WITH COMPOSITE DESIGN	1
7.2 DESIGN PROCESS.....	2
7.3 MATERIAL AND PROCESS SELECTION	2
7.3.1 Materials selection.....	2
7.3.2 Manufacturing process selection.....	4
7.3.3 Quality control.....	4
7.3.4 Producibility	4
7.3.5 Tooling.....	4
7.3.6 Environmental effects	4
7.4 STRUCTURAL CONCEPTS.....	4
7.4.1 Solid laminate vs. sandwich vs. stiffened structure	4
7.4.2 Layup selection.....	4

TABLE OF CONTENTS

	Page
7.4.3 Tailored properties.....	4
7.5 DETAILED PART DESIGN.....	6
7.5.1 Elastic properties.....	6
7.5.2 Laminate design considerations.....	6
7.5.3 Thermal compatibility/low CTE.....	7
7.5.4 Composite/metal interfaces.....	7
7.5.5 Design for supportability.....	7
7.5.6 Design of joints.....	7
7.5.6.1 Mechanically-fastened joints.....	8
7.5.6.2 Bonded joints.....	8
7.5.6.2.1 Problems associated with adhesive bonding to peel-ply composite surfaces.....	8
7.5.7 Damage resistance/tolerance.....	10
7.5.8 Durability.....	10
7.5.9 Lightning strike.....	10
7.6 OPTIMIZATION.....	10
7.7 LESSONS LEARNED.....	10
REFERENCES.....	26
CHAPTER 8 ANALYSIS OF LAMINATES.....	1
8.1 INTRODUCTION.....	1
8.2 LAMINA PROPERTIES AND MICROMECHANICS.....	1
8.2.1 Assumptions.....	1
8.2.1.1 Material homogeneity.....	1
8.2.1.2 Material orthotropy.....	2
8.2.1.3 Material linearity.....	2
8.2.1.4 Residual stresses.....	2
8.2.2 Fiber composites: stress-strain properties.....	2
8.2.2.1 Elastic properties.....	2
8.2.2.2 Visco-elastic properties.....	2
8.2.3 Fiber composites: physical properties.....	3
8.2.3.1 Thermal expansion and moisture swelling.....	3
8.2.3.2 Thermal conduction and moisture diffusion.....	4
8.2.4 Thick composite 3-D lamina properties.....	4
8.3 LAMINATE STIFFNESS ANALYSIS.....	4
8.3.1 Lamination theory.....	4
8.3.2 Laminate properties.....	6
8.3.2.1 Membrane stresses.....	6
8.3.2.2 Bending.....	8
8.3.2.3 Thermal expansion.....	11
8.3.2.4 Moisture expansion.....	12
8.3.2.5 Conductivity.....	12
8.3.3 Usage of moduli values for analysis.....	12
8.3.4 Thermal and hygroscopic analysis.....	13
8.3.4.1 Symmetric laminates.....	13
8.3.4.2 Unsymmetric laminates.....	14
8.3.5 Thick composite 3-D laminate analysis.....	14
8.4 LAMINATE IN-PLANE STRESS ANALYSIS.....	14
8.4.1 Stresses and strains due to mechanical loads.....	15
8.4.2 Stresses and strains due to temperature and moisture.....	16
8.4.3 Netting analysis.....	18

TABLE OF CONTENTS

	Page
8.4.3.1 Netting analysis for design of filament wound pressure vessels.....	19
8.4.4 Nonlinear stress analysis.....	21
8.5 GENERAL LAMINATE STRENGTH CONSIDERATIONS	22
8.5.1 Lamina strength and failure modes	23
8.5.1.1 Axial tensile strength	23
8.5.1.1.1 Weakest link failure.....	25
8.5.1.1.2 Cumulative weakening failure.....	25
8.5.1.1.3 Fiber break propagation failure.....	25
8.5.1.1.4 Cumulative group mode failure.....	26
8.5.1.2 Axial compressive strength	26
8.5.1.3 Matrix mode strength.....	28
8.5.2 Laminate level failure modes.....	30
8.5.2.1 Tension.....	31
8.5.2.2 Compression	32
8.5.2.3 Matrix cracks	32
8.5.3 Effects of transverse tensile properties in unidirectional tape	34
8.5.4 Effect of stacking sequence on strength	34
8.5.5 Lamina versus laminate strength	35
8.6 LAMINATE IN-PLANE STRENGTH PREDICTION	36
8.6.1 Lamina to laminate analysis approach	38
8.6.1.1 Initial lamina failure.....	38
8.6.1.2 Subsequent failures.....	42
8.6.2 Fiber failure approach (laminate level failure)	42
8.6.2.1 Maximum strain theory for glass fiber composites	43
8.6.2.2 Truncated maximum strain theory for carbon fiber composites	44
8.6.2.3 Strength values for use with maximum strain theory	46
8.6.3 Laminate strength prediction at stress concentrations.....	47
8.7 INTRA- AND INTER-LAMINAR STRESS AND FAILURE ANALYSIS	50
8.7.1 Out-of-plane loads	50
8.7.2 Interlaminar stresses	51
8.7.2.1 Edge effects.....	51
8.7.2.2 Internal ply drop-offs.....	53
8.7.2.3 Interlaminar stresses in curved laminates	53
8.7.3 Delamination.....	53
8.7.3.1 Compression	55
8.7.4 Calculation of strain energy release rate interlaminar fracture mechanics	56
8.7.4.1 Introduction.....	56
8.7.4.2 Major steps in determination of G.....	57
8.7.4.2.1 Definition of delamination in finite element model	57
8.7.4.2.2 Finite element solution.....	61
8.7.4.3 Calculation of G	62
8.7.4.3.1 Virtual crack closure technique – two-dimensional linear continuum element	62
8.7.4.3.2 Virtual crack closure technique – two-dimensional quadratic continuum element	63
8.7.4.3.3 Virtual crack closure technique – three-dimensional linear continuum element	64
8.7.4.3.4 Corrections for non-uniform mesh	65
8.7.4.4 Determination of mode mix	66
8.7.4.4.1 Finite crack advance.....	66
8.7.4.5 Practical two-dimensional and three-dimensional applications.....	67
REFERENCES	68

CHAPTER 10 DESIGN AND ANALYSIS OF BONDED JOINTS.....	1
10.1 BACKGROUND	1
10.2 INTRODUCTION	2
10.3 DESIGN OF BONDED JOINTS	3
10.3.1 Effects of adherend thickness: adherend failures vs. bond failures	3
10.3.2 Joint geometry effects	4
10.3.3 Effects of adherend stiffness unbalance	5
10.3.4 Effects of ductile adhesive response	5
10.3.5 Behavior of composite adherends	7
10.3.6 Effects of bond defects	8
10.4 STRESS ANALYSIS OF BONDED JOINTS	9
10.4.1 General adhesive stresses	9
10.4.1.1 Adhesive shear stresses	9
10.4.1.2 Peel stresses	14
10.4.2 Single and double lap joints with uniform adherend thickness	16
10.4.2.1 Joint behavior with elastic response of the bond layer	16
10.4.2.2 Thermal stress effects	26
10.4.2.3 Effect of ductility on joint stresses	29
10.4.2.4 Transverse shear and stacking sequence effects in composite adherends	32
10.4.3 Tapered and multi-step adherends	33
10.4.4 T-section joints	44

TABLE OF CONTENTS

CHAPTER 11 DESIGN AND ANALYSIS OF BOLTED JOINTS	1
11.1 BACKGROUND	1
11.2 INTRODUCTION	2
11.3 ANALYSIS OF BOLTED JOINTS	2
11.3.1 Load sharing in a joint	2
11.3.2 Analysis of local failure	5
11.3.3 Failure criteria	12
11.4 DESIGN OF BOLTED JOINTS	13
11.4.1 Geometry	13
11.4.2 Lay-up and stacking sequence	13
11.4.3 Fastener selection	13
11.5 FATIGUE EFFECTS ON BOLTED JOINTS	14
11.5.1 Influence of loading mode	14
11.5.2 Influence of joint geometry	15
11.5.3 Influence of attachment details	15
11.5.4 Influence of laminate lay-up	16
11.5.5 Influence of environment	16
11.5.6 Influence of specimen thickness	16
11.5.7 Residual strength	16
11.6 TEST VERIFICATION	16

CHAPTER 12 DAMAGE RESISTANCE, DURABILITY, AND DAMAGE TOLERANCE	1
12.1 INTRODUCTION	1
12.1.1 Principles	1
12.1.2 Composite-related issues	2
12.1.3 Aircraft damage tolerance	3
12.1.4 General guidelines	4
12.2 RULES, REQUIREMENTS AND COMPLIANCE FOR AIRCRAFT	5
12.2.1 Civil aviation regulations and guidance	6
12.2.1.1 Static strength with damage	7
12.2.1.2 Damage tolerance and fatigue	9
12.2.2 Categories of damage	14
12.2.2.1 Category 1	14
12.2.2.2 Category 2	14
12.2.2.3 Category 3	15
12.2.2.4 Category 4	15
12.2.2.5 Category 5	15
12.2.2.6 Factors affecting placement of damage in categories	16
12.2.3 Load and damage relationships	16
12.2.4 Compliance approaches	19

TABLE OF CONTENTS

	Page
12.2.4.1 Deterministic compliance method	20
12.2.4.2 Probabilistic or semi-probabilistic compliance methods.....	24
12.3 DESIGN DEVELOPMENT AND SUBSTANTIATION	29
12.3.1 Damage design criteria.....	29
12.3.1.1 Category 1	29
12.3.1.2 Category 2	30
12.3.1.3 Category 3	31
12.3.1.4 Category 4	31
12.3.1.5 Large damage from undefined events	31
12.3.2 Substantiation.....	31
12.3.2.1 Category 1	32
12.3.2.2 Category 2	32
12.3.2.3 Category 3	33
12.3.2.4 Category 4	33
12.3.2.5 Full-scale testing.....	33
12.3.3 Addressing Category 5 damage	37
12.3.4 Additional design development guidance	38
12.4 INSPECTION FOR DEFECTS AND DAMAGE	39
12.4.1 Aircraft in-service inspection programs	39
12.4.2 Development of damage inspection data	41
12.4.3 Development of inspection programs	42
12.4.4 Environmental deterioration and accidental damage rating systems.....	42
12.4.5 Fleet leader programs	43
12.4.6 Probability of detection studies.....	43
12.5 DAMAGE RESISTANCE	44
12.5.1 Influencing factors	44
12.5.1.1 Summary of results from previous impact studies	44
12.5.1.2 Through-penetration impacts	46
12.5.1.3 High velocity impacts.....	49
12.5.1.4 Material type and form effects	49
12.5.1.5 Depth of damage	50
12.5.1.6 Laminate thickness effects	51
12.5.1.7 Structural size effects	52
12.5.1.8 Sandwich structure	55
12.5.2 Design issues and guidelines	57
12.5.2.1 Use of impact surveys for establishing critical damages	58
12.5.2.2 Structural arrangement and design details	58
12.5.2.3 Mechanical impact.....	59
12.5.2.4 Bird strike.....	59
12.5.2.5 Ground hail	59
12.5.2.6 In-flight hail	61
12.5.2.7 Lightning	62
12.5.2.8 Handling and step loads.....	62
12.5.2.9 Edge erosion	63
12.5.2.10 Fluid ingress	64
12.5.2.11 Overheating	64
12.5.2.12 Aging	64
12.5.2.13 Chemical contamination	64
12.5.2.14 Disassembly for repair.....	64
12.5.3 Test issues	64
12.5.4 Analysis methods	64
12.6 DURABILITY AND DAMAGE GROWTH UNDER CYCLIC LOADING	64

TABLE OF CONTENTS

	Page
12.6.1 Influencing factors	64
12.6.1.1 Cyclic stress ratio (R-ratio) and spectrum effects	66
12.6.1.2 Environment	66
12.6.2 Design issues and guidelines	66
12.6.2.1 Design details	66
12.6.2.2 Damage tolerance considerations	66
12.6.3 Test issues	66
12.6.3.1 Scatter analysis of composites	68
12.6.3.1.1 Individual Weibull method	70
12.6.3.1.2 Joint Weibull method	71
12.6.3.1.3 Sendeckyj equivalent static strength model	71
12.6.3.2 Life factor approach	72
12.6.3.3 Load enhancement factor using scatter analysis	74
12.6.3.4 Ultimate strength approach	80
12.6.3.5 Spectrum truncation and clipping	81
12.6.3.6 Test environment	83
12.6.3.7 Damage growth	83
12.6.4 Analysis methods	84
12.6.4.1 Durability and damage onset analysis	85
12.6.4.1.1 In-plane fatigue analysis	85
12.6.4.1.2 Matrix cracking onset analysis	85
12.6.4.1.3 Delamination onset analysis	88
12.6.4.2 Damage growth analysis	97
12.6.4.2.1 Large through-penetration damage	97
12.6.4.2.2 Delaminations and disbonds	97
12.6.4.2.3 Impact damages	100
12.6.4.2.4 Cuts and gouges	100
12.6.4.3 Cumulative life prediction	100
12.7 RESIDUAL STRENGTH	100
12.7.1 Influencing factors	101
12.7.1.1 Relationships between damage resistance and residual strength	101
12.7.1.2 Structure with impact damage	101
12.7.1.2.1 Material effects	101
12.7.1.2.2 Interlaminar toughness effects	102
12.7.1.2.3 Stacking sequence effects	102
12.7.1.2.4 Laminate thickness effects	103
12.7.1.2.5 Through-thickness stitching	103
12.7.1.2.6 Sandwich structure	104
12.7.1.2.7 Impact characteristic damage states	105
12.7.1.2.8 Residual strength - compressive/shear loads	108
12.7.1.2.9 Residual strength - tensile loads	109
12.7.1.2.10 Stiffened panels	110
12.7.1.3 Structure with through-penetration damage	111
12.7.1.3.1 Stitched skin/stiffener panels	122
12.7.2 Design issues and guidelines	123
12.7.2.1 Stacking sequences	123
12.7.2.2 Sandwich structure	123
12.7.3 Test issues	123
12.7.3.1 Impact tests on coupons	124
12.7.3.2 Impact tests on stiffened panels	124
12.7.3.3 Impact tests on sandwich panels	124
12.7.3.4 Tests for large through-penetration damage to stiffened panels	124

TABLE OF CONTENTS

	Page
12.7.3.5 Tests for large through-penetration damage to sandwich panels	124
12.7.4 Analysis methods	124
12.7.4.1 Large through-penetration damage	124
12.7.4.1.1 Power-Law (Mar-Lin) model	127
12.7.4.1.2 Strain softening laws	128
12.7.4.1.3 LEFM - based methods	130
12.7.4.1.4 R-curves	131
12.7.4.2 Single delaminations and disbonds	132
12.7.4.2.1 Fracture mechanics approaches	132
12.7.4.2.2 Sublaminar buckling methods	135
12.7.4.3 Impact damages	136
12.7.4.3.1 Sublaminar buckling methods	136
12.7.4.3.2 Strain softening methods	139
12.7.4.4 Cuts and gouges	141
12.8 APPLICATIONS/EXAMPLES	142
12.8.1 Rotorcraft (Sikorsky)	142
12.8.1.1 Damage	142
12.8.1.2 Environment	142
12.8.1.3 Test loading conditions related to critical failure modes	142
12.8.1.4 Test loads - load enhancement factor (LEF)	143
12.8.1.5 Spectrum - truncation	143
12.8.1.6 Residual strength test	144
12.8.2 Commercial aircraft (Boeing 777 empennage torque boxes)	144
12.8.2.1 Durability - environmental	145
12.8.2.2 Durability - mechanical loads	145
12.8.2.3 Damage	145
12.8.2.4 Damage tolerance - "no growth" tests	146
12.8.2.5 Damage tolerance - residual strength	147
12.8.2.6 Inspection plan	147
12.8.3 General aviation (Beech Starship)	148
12.8.3.1 Introduction	148
12.8.3.2 Damage tolerance evaluation	148
12.8.3.2.1 Regulatory basis	148
12.8.3.2.2 Typical damage scenarios and related requirements	148
12.8.3.2.3 Damage source and modes	148
12.8.3.2.4 Element testing	149
12.8.3.2.5 Test results	151
12.8.3.2.6 Full scale tests	154
12.8.3.2.7 Continued airworthiness inspections	155
12.8.3.3 Service experience	155
12.8.3.4 Conclusions	156
12.8.4 Military aircraft	156
12.9 SUPPORTING DISCUSSIONS	156
12.9.1 Compliance	156
12.9.1.1 Realistic impact energy threats to aircraft	156
12.9.2 Damage resistance	159
12.9.2.1 Development of hail threat distributions	159
12.9.3 Durability and damage growth	159
12.9.3.1 Durability and damage onset case studies	159
12.9.3.1.1 Skin/stringer debonding strength and life	160
12.9.3.1.2 Rotor hub flexbeam fatigue life	161
12.9.3.2 Damage growth case studies	165

18.5.3.4 Curing agents.....	9
18.5.3.5 Autoclaving materials.....	9
18.5.3.6 Packaging materials.....	9
18.5.4 Lightweighting.....	9
18.6 REUSE OF COMPOSITE COMPONENTS AND MATERIALS.....	10
18.6.1 Reuse of composite components.....	10
18.6.2 Machining to smaller components.....	10
18.7 MATERIALS EXCHANGE.....	10
18.7.1 Reallocation of precursors.....	10
18.7.2 Composite materials exchange services.....	10
18.7.2.1 Care of unused materials.....	11

TABLE OF CONTENTS

	Page
18.7.2.2 Packaging.....	11
18.7.2.3 Documentation of care	11
18.7.2.4 Description of unused materials	11
18.7.2.5 DOD resale restrictions	11
18.8 RECYCLING OF COMPOSITE MATERIALS.....	11
18.8.1 Design for disassembly and recycling	11
18.8.1.1 Fasteners.....	12
18.8.1.2 Adhesives	12
18.8.1.3 Hybrid composites	12
18.8.2 Recycling logistics	12
18.8.2.1 Collection and transportation.....	12
18.8.2.2 Identification of fibers and matrices.....	13
18.8.2.2.1 Fourier transform infrared spectroscopy.....	13
18.8.2.2.2 Densitometry.....	13
18.8.2.2.3 Coding of components.....	13
18.8.2.2.4 Routing of waste streams	13
18.8.3 Processing of composite recyclate.....	13
18.8.3.1 Size reduction.....	14
18.8.3.2 Matrix removal	14
18.8.3.3 Fiber reuse	14
18.8.3.4 Products of matrix removal.....	15
18.8.3.5 Other recycling and processing methods.....	15
18.8.4 Recycling of waste prepreg	16
