

AIRCRAFT ELECTRICAL & ELECTRONIC SYSTEM LIGHTNING PROTECTION

AIRCRAFT SYSTEM LIGHTNING PROTECTION

ABOUT THE COURSE

The Aircraft Electrical and Electronic System Lightning Protection course is a premier comprehensive certification course that discusses all aspects related to certification, design, and testing from an engineering/DER perspective.

Course topics include:

- Why Aircraft Electrical and Electronic System Lightning Protection has become important
- Why certification efforts are required by the FAA
- How to design and plan to meet these requirements.

VIRTUAL COURSE DATES

NOVEMBER 8-12, 2021

SCHEDULE

M-F 10:00 A.M. - 4:00 P.M.

(INCLUDES 1 HR LUNCH BREAK)

The course covers FAA regulations, Advisory Circulars, ARPs and DO-160, and explains how they apply to Aircraft Electrical and Electronic System Lightning Protection certification. Areas include:

- Attachment zones
- Equipment and functional critically (safety assessment)
- Aircraft level test methods and interpretation
- Bench-level equipment test methods and levels

PRICING INFORMATION

Virtual Public Course

(real-time online)

\$1,875 PER STUDENT
