How to use the video to our course

Presenter Dr. Freh Wuhib

Using Videos in Our Courses

- Adding videos as a raw .mp3 or .mp4 format causes trouble on blackboard.
 - It takes a lot of space on blackboard
 - Students need to download the video to watch it
 - Downloading the video takes time; might even be impossible with slow connection.
- Panopto is the university's video creation and hosting service.
- It allows screen capture, picture-in-picture, talking head, and PowerPoint views.
- You can also use your own YouTube account to create video links.

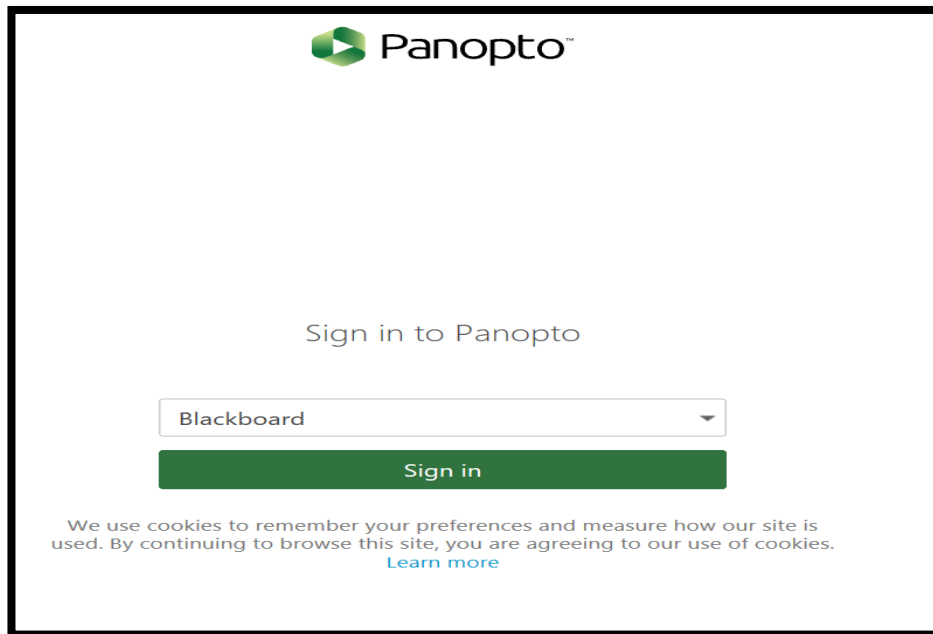

More about Panopto

- Panopto allows for captioning.
 - Machine captioning is the first step.
 - You must edit your own captions.
- It also allows student use for assignments.
- Contact Instructional Design and Access for specific training.

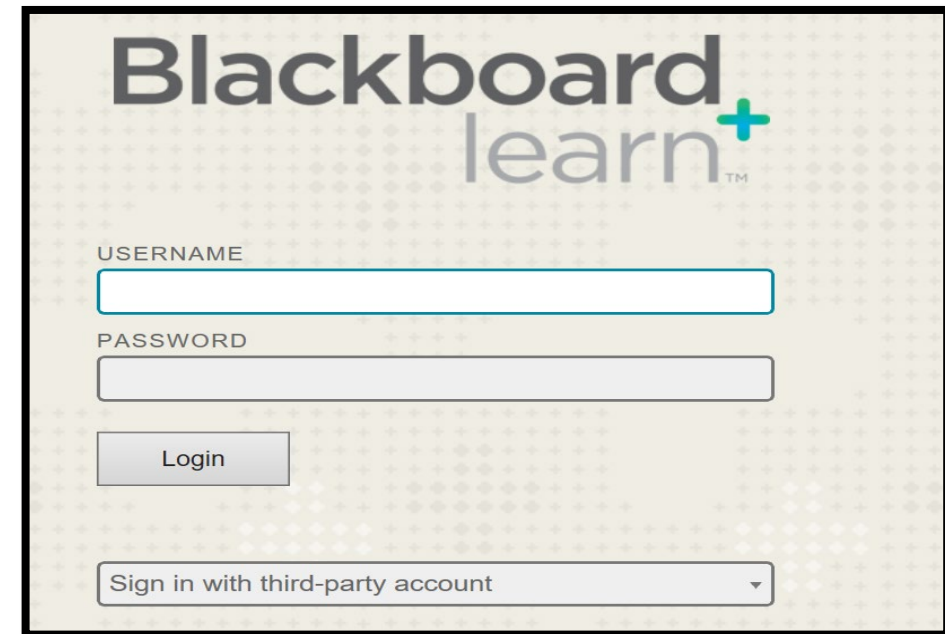

How to Add your Video to Panopto

- There are different ways to add your video to Panopto.
- An easier way is, open a new browser tab and go to wichita.hosted.panopto.com.

The image shows the Panopto sign-in page. At the top is the Panopto logo. Below it is the text "Sign in to Panopto". There is a dropdown menu with "Blackboard" selected. Below the dropdown is a green "Sign in" button. At the bottom, there is a small text block: "We use cookies to remember your preferences and measure how our site is used. By continuing to browse this site, you are agreeing to our use of cookies. [Learn more](#)".

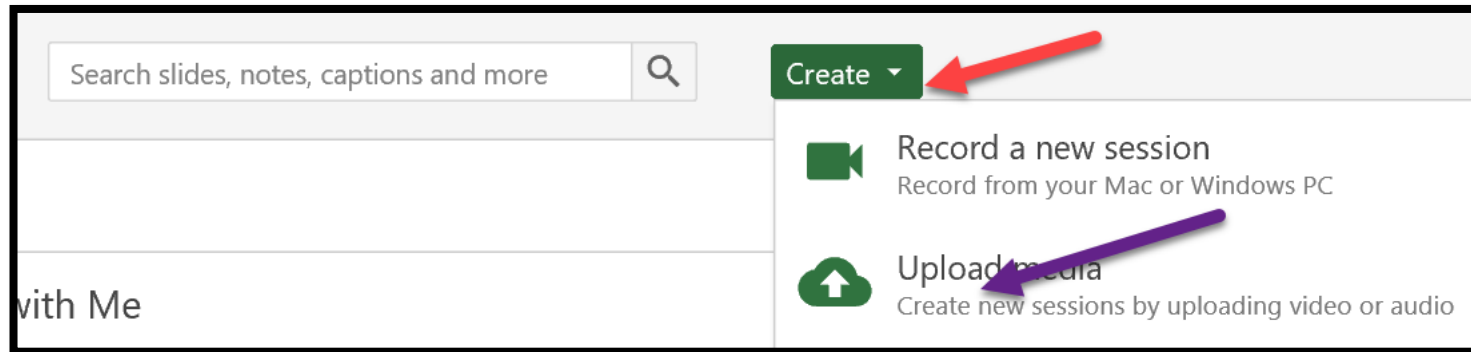

The image shows the Blackboard Learn login page. At the top is the "Blackboard learn" logo. Below it are two input fields: "USERNAME" and "PASSWORD". Below the password field is a grey "Login" button. At the bottom is a dropdown menu with the text "Sign in with third-party account".

Signing into Panopto

- Sign into Panopto using the Blackboard sign-in option included in the dropdown menu using your WSU credential.
- Once signed into Panopto, use the "Create" session button, near the top search box, and select "Upload Media" from the list of options available.

Adding Your Video

- From the new creation page, you can drag and drop the file from an open file explorer window on your computer, or click into the outlined box to open a file explorer and select the file you want to add.
- Be sure to check that you have selected the proper folder in the "Add files to" dropdown menu as this will be the folder that your Panopto session will be created under.

Add files to careerdevelopment.dev: Career Development ×

Drag video or audio files here (or click to find on your computer)

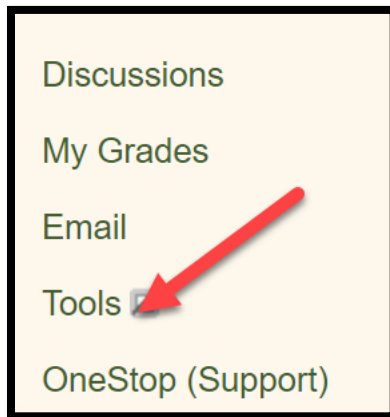

Completing the Process

- Once you have added your file and ensured that you have selected the proper folder, select submit.
- Your new session will start to process immediately and you will be notified by email when it is complete and ready to add captions.
- Once the newly created session is complete and ready for captions to be added, follow the instructions provided in the Adding Captions to Panopto Sessions page.

Another Way to Upload Your Video

- Another way to upload Panopto through the course on Blackboard.
- Click the “Tools” menu on the left navigation pane and find “Panopto Content” tab, and click it.

Configuring Course to Panopto

- You need to configure your course to Panopto to have a folder for the course. You need to do this even if you want to upload your video from the Panopto site as we saw earlier.
- After you click the ‘Panopto Content’ tab under “Tools”, click the “Configure” tab.

This course is not provisioned with Panopto. Before a course can be used with Panopto it must be setup.

Configure

Uploading the Video

- Your course now has a Panopto folder.
- Next click “Create” and follow the same step as uploading from the website.
- This time you do not have to worry about which folder to save the video because you access Panopto from the course; it is automatically saved in the course’s folder.

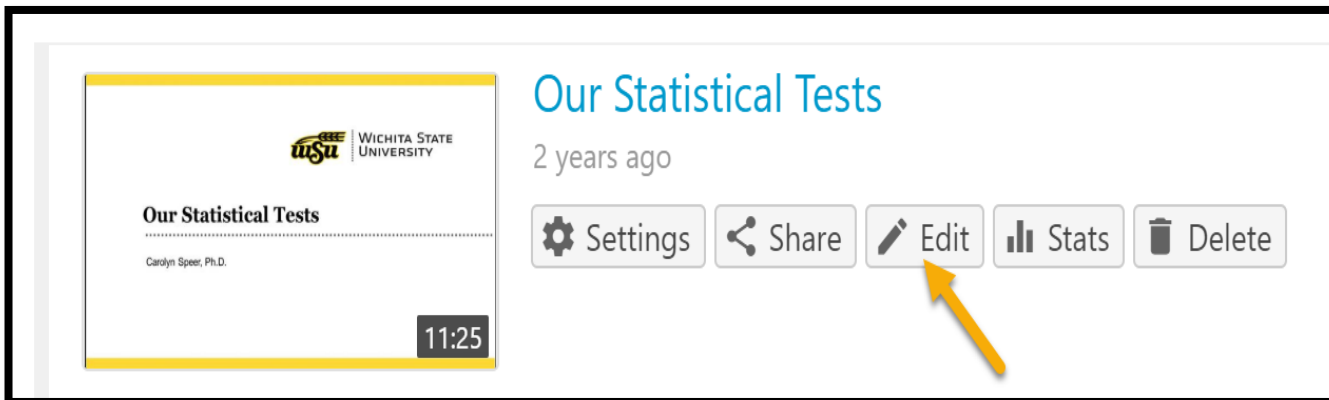

Adding Caption to Your Video

- Ensure that your Panopto video is fully complete and finished processing. If the video is still processing, please wait until it is finished before attempting to caption your work.
- Once the video is fully processed and ready to be edited, to go the wichita.hosted.panopto.com website to access your video in it's course folder.
- Once you have located the video in it's course folder, hover over the video and select the Edit button from the options that appear.

Editing to Add Caption

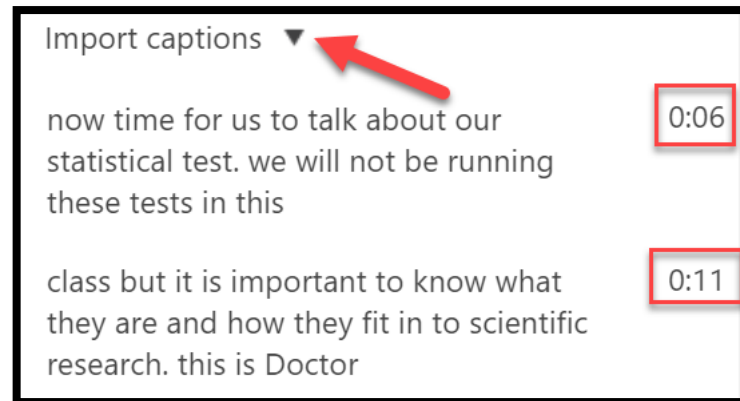

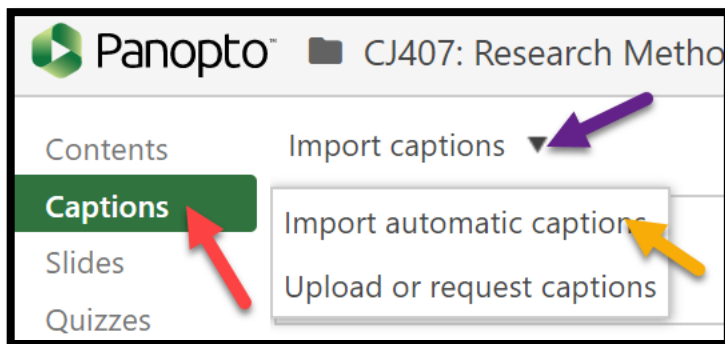

- Once you have located the video in it's course folder, hover over the video and select the Edit button from the options that appear.
- In the editing window, a menu will appear on the left side of the screen. The second option available in the menu is Captions.
- Click on the Captions tab.

Automatic Caption

- Next, in the Captions tab, a new dropdown menu will appear called "Import Captions".
- Clicking on the dropdown arrow will provide you with two options: "Import Automatic Captions" and "Upload or request captions".
- Select "Import Automatic Captions".
- Automatic captions will begin to appear under the dropdown menu.

Editing Automatic Captions

- Next, edit your captions for accuracy. Remember that although these are automatic and have a high percentage rate of accuracy, they will not be 100% accurate and will need to be edited for clarity.
- To edit your captions, simply click on the text that you wish to change. Clicking once will highlight and replace all of the text in that box as you type.
- To change only part of the text in a captions box, click a second time on the text you want to change. This will place our cursor on that particular part of the text for easy, smaller changes to be made.
- When you are finished making changes to your captions for accuracy, please be sure to click on the "Apply" button at the top right-hand corner of your editing window. If another pop-up comes up indicating that you have made changes, select "Ok".

Adding Video to YouTube

- YouTube is an acceptable video hosting option as well.
- All videos should be set to “Unlisted” and not “Private” or “Public.”
- Videos must be captioned before using in a class.
 - YouTube’s captioning is similar to Panopto’s, with a machine captioning first step and required editing.
- You may link or embed other people’s YouTube videos, but you need to ensure they are accurately and completely captioned before using.
 - If you need to use an un-captioned video, contact Instructional Design and Access to receive training on how you can add captions to third party videos.

Thank You!
